stress to ensure

SHOCK MACHINE AVCO 105

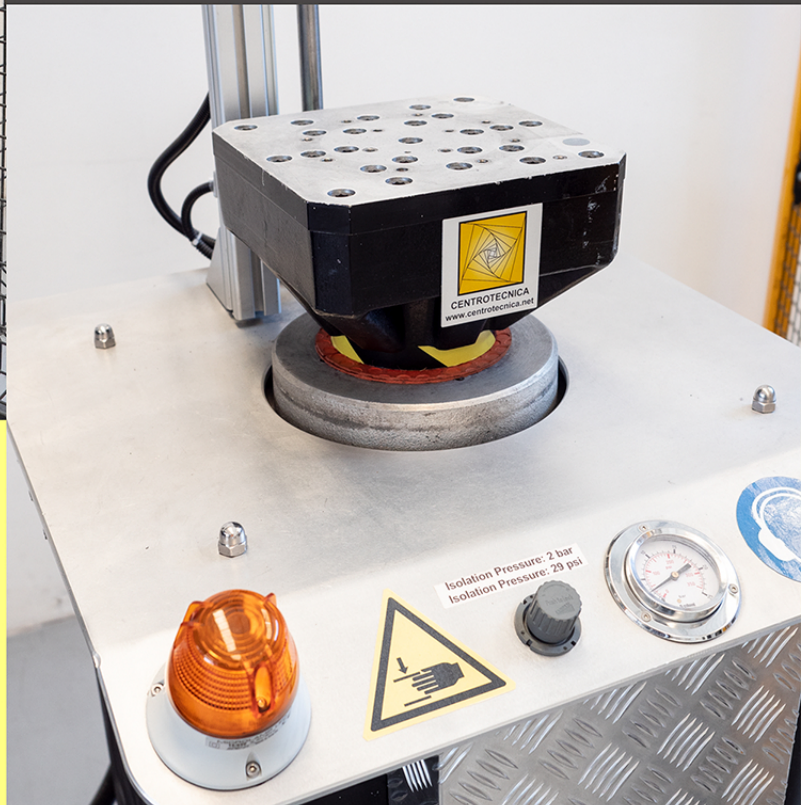

upgraded version developed by Centrotecnica

This machine allows the execution of mechanical semi-sinusoidal shock tests.

AVCO105 is used for item during engineering and design phases for resistance or destructive tests on components, circuits and complete systems.

Thanks to Centrotecnica's upgrade it has a new digital control and a new pneumatic circuit that makes the machine able to strongly increase the number of shocks per minute and to obtain a very precise reproducibility.

FEATURES AND PERFORMANCE

Maximum acceleration: 3000 g
Maximum speed: 8,38 m/s
Maximum stroke: 450 mm
Shock endurance: 0.2 - 25 ms
Setup area: 240 x 240 mm
Maximum payload: 22 kg
